

# Piscine Discovery

## Rush

Staff 42 [piscine@42.fr](mailto:piscine@42.fr)

*Summary: This rush is there to make you set up a mini showcase site composed of 3 pages, and to make you practice all the basics seen during this week.*

# Chapter I

## Foreword

**Gollum** : What has he done? Stupid Hobbit! You are damaging them.

**Sam** : Damaging what? They've got almost no meat. What we need are potatoes.

**Gollum** : What are potatoes my precious? What are they?

**Sam** : Potatoes you idiot! Broiled, mashed, fried, sliced or boiled with sauce. Nice fat sliced and fried in oil to go with fried fish. Even you won't resist.

**Gollum** : Oh but we will resist. To waste perfect fish like that... We prefer fish raw and alive, keep your nasty fries.

**Sam** : You are impossible.

# Chapter II

## General instructions

Unless explicitly specified, the following rules will apply every day of this Piscine.

- This subject is the one and only trustable source. Don't trust any rumor.
- This subject can be updated up to one hour before the turn-in deadline.
- The assignments in a subject must be done in the given order. Later assignments won't be rated unless all the previous ones are perfectly executed.
- Be careful about the access rights of your files and folders.
- Your assignments will be evaluated by your Piscine peers.
- All shell assignments must run using `/bin/bash`.
- You must not leave in your turn-in your workspace any file other than the ones explicitly requested By the assignments.
- You have a question? Ask your left neighbor. Otherwise, try your luck with your right neighbor.
- Every technical answer you might need is available in the `man` or on the Internet.
- Remember to use the Slack workspace dedicated to your piscine!
- You must read the examples thoroughly. They can reveal requirements that are not obvious in the assignment's description.
- By Thor, by Odin! Use your brain!!!

# Chapter III

## Mandatory part

Following your first week of web training, in this last day you will have to set up a mini one-page site with your resumes. For those who don't know what a one-page site is, check out the list of sites present .

Of course, we won't ask you to make this one as complete as these examples..

Your first page will simply be a summary to go to the two CVs with two links.

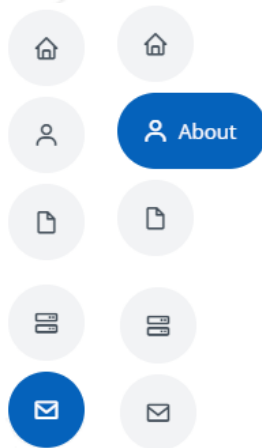

This first page must be responsive and pretty! The use of css framework like bootstrap is strongly advised.

A resume page must have at least:

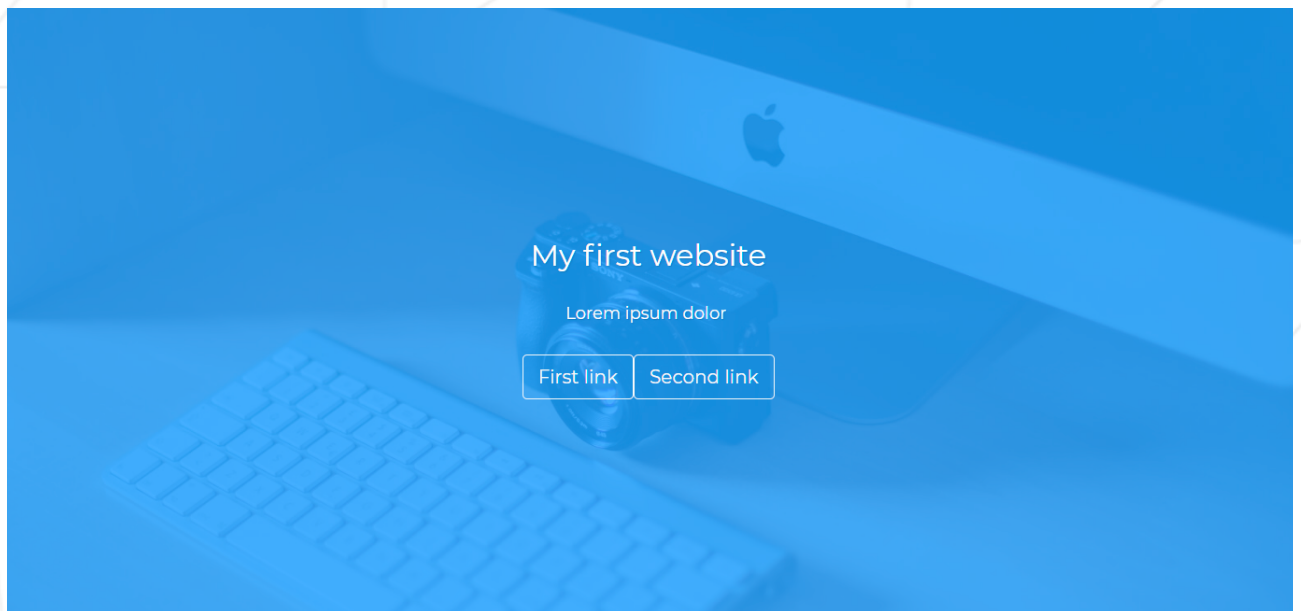

- **A navigation bar** : You must implement your own navigation bar (with several links to move around your page easily). This bar must point to at least 3 parts of your resume. Finally this bar must remain fixed during your navigation on the page.
- **Three parts** : You must implement 3 parts in your resume.
- **A first part** : which will display simple content with a photo, a name a job title.
- **A second part** : which will display the professional experiences and skills of the person.
- **A last part**: with links to contact the person.

You are free to arrange the content. We strongly advise you to use templates to help you.

Here is an example of a navigation bar:

Here is an example of a home page:

# Chapter IV

## Submission and peer-evaluation

- In the `discovery_piscine` folder at the root of your home, create a new `rush` folder and navigate to it.
- For this day your rendering file will be in the `rush` folder.
- You need to put an author file in the root of your rendering folder containing your logins, each on one line, and followed by a `'\n'`:

```
$>cat -e auteur
xlogin$
ylogin$
$>
```

Please note, during your defense anything that is not present in the folder for the day will not be checked.
